

Stone Consulting, Inc.

Marcellus Shale Services

The Marcellus Shale formation has created increased activity in Pennsylvania. Stone Consulting, Inc. is capable of providing a wide range of services for oil and gas development. Our company is certified to work in the Commonwealth of Pennsylvania as well as being certified in 39 other states. Our company has a reputation of hearing customers' needs and finding cost effective solutions.

Stone Consulting, Inc. has years of experience in working with the Department of Environmental Protection, the Army Corp of Engineers, the US Forest Service (Allegheny National Forest), County and State agencies. We are capable of providing the expertise necessary to guide our clients through these new rules and regulations in a timely and cost efficient manner. Our company has qualified personnel with national CPESC registration and soon will have national CPSWM registration. Our work experience has not only assisted clients in getting well development approval in the Allegheny National Forest, but also in exceptional-value watersheds and high-quality watersheds. Some of these environmental permits are:

- ESCGP-1 – Oil & Gas industry's NPDES Permit for Erosion Control & Storm Water Management controls
- Well Plats
- Land Development and Grading Plans
- Erosion Control Plans & Storm Water Management Control Plans
- Erosion Control monitoring, as required by ESCGP-1
- Pollution, Prevention and Control (PPC) Plans
- PNDI – Identification of endangered flora, fauna and species
- Stream Encroachment Permits- for disturbance of streams or wetlands
- Joint permit applications
- Wetlands Delineations
- PennDOT Highway Occupancy Permits

Stone Consulting, Inc. has the ability to bring to our clients a broad range of engineering abilities. Each of these abilities enables our clients to have a multitude of options when considering how to develop their sites. These abilities include, but are not limited to:

- Rail design as an option for import materials and equipment to the site.
- Bridge inspections to assure that trucks and vehicles can access the site safely.
- Structural Engineering for bridge and building design.
- Mining design and permits should marketable raw materials be found.
- Surveying – We are associated with Fox & Fox, Inc. who has full GPS capability.
